

Savitribai Phule Pune University
T.Y.B.Sc.(C.S.) (NEP – 2020) SEM – V Practical Examination
Lab Course CS-305-MJ-P
Operating System-I

Duration: 3 Hours

Maximum Marks:35

-
- Q.1 Write the program to simulate Round Robin (RR) scheduling. The arrival time and first CPU-burst for different n number of processes should be input to the algorithm. Also give the time quantum as input. The next CPU burst should be generated randomly. The output should give Gantt chart, turnaround time and waiting time for each process. Also find the average waiting time and turnaround time. [15 Marks]
- Q.2 Implement the C program that accepts an integer array. Main function forks child process. Parent process sorts an integer array and passes the sorted array to child process through the command line arguments of `execve()` system call. The child process uses `execve()` system call to load new program that uses this sorted array for performing the binary search the particular item in the array. [15 Marks]
- Q.3. Oral/Viva [5 Marks]
